`history τ: flee(bandit) · cut_rope(wife, dagger) · self_strike(samurai, dagger)`

replay

the fatal act (replay τ): actor = samurai · weapon = dagger · type = self-strike

each feature is a fixed *piecewise* rule of the fatal act. For the **bandit**, the **highlighted** branch fires:

$$d_{i,1}\ \text{(clean hands)} = \begin{cases} \mathbf{1} & i \text{ did not deal the fatal blow} \\ 0.15 & i \text{ dealt it} \end{cases}$$

$$d_{i,2}\ \text{(agency)} = \begin{cases} 1 & i \text{ is the fatal actor} \\ \mathbf{0.15} & \text{otherwise} \end{cases}$$

$$d_{i,3}\ \text{(honour)} = \begin{cases} \mathbf{0.6} & i \text{ is not the killer} \\ 0.1\text{–}1 & i \text{ killed (max: armed longsword duel)} \end{cases}$$

$$U_{\text{bandit}} = \frac{100}{3}\,(\mathbf{1} + \mathbf{0.15} + \mathbf{0.6}) = \mathbf{58}$$
